Application Details

Name: IU Alarm

Version: 1.0

Company Name: 호야지기

Windows Phone OS Version: 7.1

Test ID: 301046

Submission Received: 05/27/2012

Testing Completed: 06/01/2012

Application Test Details

Capabilities Tested: Networking

Language(s): EnglishNorthAmerica

Result: Failed

Failure Summary: 6.5.1, 6.5.2

Exception(s) Applied: None

Action: Please address the comprehensive list of failures below, review the [Windows Phone Application Certification requirements](http://go.microsoft.com/fwlink/?LinkID=183220) (<http://go.microsoft.com/fwlink/?LinkID=183220>) and resubmit your updated application for certification testing. For further assistance, please submit a support ticket using the Support e-Form in the [App Hub Dashboard](http://go.microsoft.com/?linkid=9762121) (<http://go.microsoft.com/?linkid=9762121>).

Windows Phones Tested: LG Optimus 7, Nokia Lumia 610, Nokia Lumia 800

Technical

6.5 Non Music + Videos Hub Applications That Play Media

6.5.1

Requirements

When the user is already playing music on the phone when the application is launched, the application must not pause, resume, or stop the active music in the phone MediaQueue by calling the Microsoft.Xna.Framework.Media.MediaPlayer class.

If the application plays its own background music or adjusts background music volume, it must ask the user for consent to stop playing/adjust the background music (e.g. message dialog or settings menu). This prompt must occur each time the application launches, unless there is an opt-in setting provided to the user and the user has used

Expected Result

Test Process Required:

1. Play a music file.
2. Launch the application.
3. Verify that while the application loads, it does not pause, resume or stop the actively playing music.

this setting to opt-in.

Comments: The application fails to prompt the user for consent to stop the music that is currently playing in the Zune queue.

Result: Fail

Steps to reproduce:

1. Play music on the device from the Zune queue.
2. Launch the application.
3. Select the "add" button.
4. Observe the music playing from the device's Zune queue pauses, and the user is not prompted for permission.

6.5.2

Requirements

If an application plays background music, the application must provide the user with configurable settings for both the background music, and the background music volume.

Expected Result

Test Process Required:

1. Launch the application.
2. Verify that the application allows a user to configure the background music or background music volume of the application.
3. Verify that changes made to these settings do not affect music playback on the device after the application closes.

Comments: The application does not have settings that allow the user to configure the application's background music.

Result: Fail
